

Responsable

init repo git

dev. pass → groupe dev
 Prod. pass → contenu = mot de passe en clair
 Prod. pass → grouper pour prod

X, dev

git clone

Y, dev, Prod

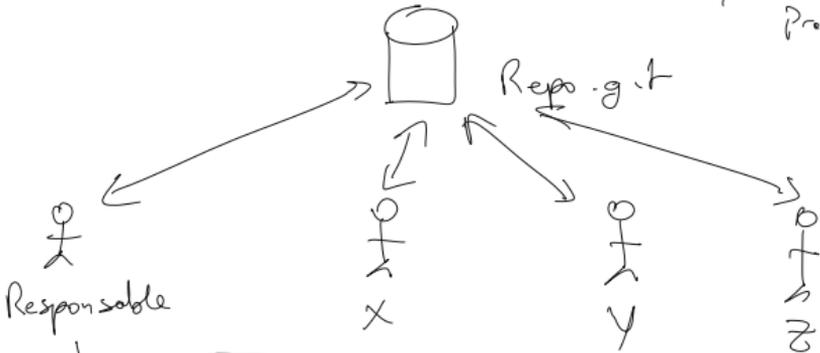

ansible-playbook site.yml → erreur

" site.yml --valet-id dev@dev-pass → OK

" " --valet-id dev@prod-pass → erreur, Pas de droits

etiquette, peut avoir n'importe quel nom

→ OK pour lire le md5 en Prod

inventories /
 Production /
 hosts
 keys (mots de passe)
 group- vars/
 host- vars/

quadf /
 dev /
 library / → fichiers statiques

site.yml
 front.yml
 back.yml
 bid.yml

infra découplé hiérarchiquement

roles /
 scripts /
 docs / (Rapports d'incident, bonnes pratiques, règles)

modules / → les modules créés en interne

filters /
